

Gooooood evening,

Thanks for downloading my instrument. It's a zip file containing the instrument patch (the file you'll need to load into an sfz-compatible player) and the samples (the files that provide the sounds). These files have been lovingly prepared in the abominable studio; you're free to use the instrument in your own compositions, but please don't re-distribute the raw wav files.

How to install: unzip the zip file. I like to unzip all my sfz instruments into a folder with the instrument name in a folder called 'sfz'. In this way, you can keep all your sfz instruments together.

In your DAW of choice, open an sfz-compatible player. Open the sfz file and you're done. Have fun with the instrument and write something awesome!

Cheers, abominable (Mark)
